

chemie.

A new continuity.

We have chosen to focus the spotlight on the whole Est Chemie world: a world made up of concentration and constant study of solutions and an integrated approach that involves all aspects of the production cycle.

The constant growth of the company has pushed us towards an expansion of our offer addressed to new sectors, and of increasingly vital importance, to new geographical areas that represent thriving markets and stimulating challenges for those who, like us, want to become leaders in development. of sustainable integrated solutions, technologies and services in the industrial, food and water treatment sectors.

A new phase for Est Chemie, together with you.

OUR HISTORY

Born from the deep knowledge and experience of a team of technicians, chemists and specialized formulators, Est Chemie produces in Italy chemical specialties for the treatment of metal, plastic and industrial water treatment

Today the company structure is solid, dynamic, capable of adapting to any type of company. Our wide range of CHEMIE brand solutions for high performance detergency, nanotechnology, water treatment and sanitization, includes over 600 standard and customized formulations that reach the national and international industries of the engineering, steel and agri-food sectors. Our know-how, the experience gained in the field and the deep knowledge of the needs of the client companies, have led us to a natural evolution. In addition to the formulation and sale of chemical products, our proposal extends to a real technical consultancy for all our customers.

WE IMPROVE THE COURSE OF YOUR HISTORY

We provide our customers with technology, assistance and training: we are innovators in the sector and we are constantly looking for ways to help companies monitor, improve, simplify and optimize production processes to achieve important objectives in terms of economic and operational efficiency.

We place a high value on customer relationships and think of them as our business partners: we listen to their needs, analyze them and develop the best solution to meet them. In addition, we are committed every day to study and develop solutions that are recognized as not dangerous for the environment and for humans, so as to guarantee customers easier management and application of products.

ENVIRONMENT AND SUSTAINABILITY

The company is committed to making all operations sustainable to reduce the environmental impact, conserving resources, reducing waste and increasing safety.

Est Chemie has already started the production of particular products aimed at removing, or minimizing, any risks to humans and the environment.

Being products classified as "non-hazardous", client companies derive important benefits, especially at the level of effective management in the workplace and, consequently, at an economic level.

THE MAIN APPLICATIONS

SURFACES

Our specific technological solutions for surface treatments, cleaning, sanitizing and nanotechnologies, have been developed to guarantee our customers greater efficiency in their activities and in their industrial processes.

INDUSTRIAL WATERS

Our line of products for purification, boiler maintenance, cooling towers, reverse osmosis and spray booth water, is carefully designed and formulated to ensure a significant reduction in plant maintenance costs and to reduce the environmental impact to a minimum.

a measure,
yours.

THE MADE-TO-MEASURE SOLUTION FOR YOU

Choosing Est Chemie means letting yourself be carried away in an immersive experience and being able to rely completely on a professional and prepared team, which takes care of every detail with experience and dedication.

The results obtained in recent years and the constant growth of customer requests have led us to expand our offer. In addition to the standard range, Est Chemie can formulate and manufacture chemical specialties tailored to specific projects.

THE ADVANTAGES FOR THE CUSTOMER

- Optimization of products for plant management.
- Consumption monitoring and reporting.
- Technical consultancy and on-site and remote assistance.
- Single point of contact for the supply of products and systems.
- Ability to create an ad-hoc product for specific projects.

pre-sales.

Technical-commercial consultants present at national and international level. Analysis of customer needs, formulation of ad hoc offers by customer type. Study and start-up of specific projects with the aim of optimizing consumption or formulating custom-made products. Preliminary tests.

packaging, packing and shipping.

Private Label service for distributors. National and international shipments.

production.

Careful choice of raw material suppliers. Quality control upon delivery of goods. Control of the production process. Quality test of the finished product. complementary systems. Supply, installation and maintenance of water treatment machinery. Spare parts and accessories.

A service All inclusive

complementary systems.

Supply, installation and maintenance of water treatment systems. Spare parts and accessories.

after-sales.

On-site and remote technical assistance. Internal customer service. Laboratory analysis (Chemie Lab).

NOT ONLY PRODUCTS BUT SOLUTIONS

Our offer of highly performing solutions, all formulated and produced in the Italian headquarters, is completed with a series of services that allow the customer to fully rely on us: consultancy, laboratory analysis, technical assistance, constant maintenance, staff training, distribution capillary and marketing support, are aspects that make us a unique reality in the Italian and European panorama.

training - chemie academy.

We constantly organize training courses aimed at quality, maintenance and plant managers of our client companies. Our goal is to promote knowledge of the use of chemicals and equipment for the treatment of surfaces and industrial water, so that the customer can obtain important benefits deriving from effective management of the same.

without limits.

INNOVATION RESEARCH AND DEVELOPMENT

Today our company is characterized by a high level of technological innovation and a unique know-how of its kind, as it is fueled by years of experience in the field, investments in R&D and the staff who are dedicated to business growth every day.

We have created **CHEMIE LAB**: an area dedicated to the development of new products and innovative formulas, including the use of nanotechnologies for the production of special solutions for the engineering and steel industry, reformulations to obtain green and non-hazardous products for the man, study of custom solutions for specific customers, design of water treatment plants etc. Furthermore, in our laboratory we can carry out preliminary analyzes and tests to provide customers with immediate feedback on specific treatments.

discover your
potential.

GROWING TOGETHER WITH OUR CUSTOMERS

With the establishment of Chemie Academy, we have created a place dedicated to the dissemination of technical knowledge for efficient management of CHEMIE branded products and industrial water treatment machinery.

Periodically, we organize training courses for technicians and managers of client companies, with the aim of strengthening their technical and product application skills. A more conscious management and use of the correct products allows customers to reduce waste and optimize consumption.
